HMOS

SOVEREIGN MAX

EDITION 01

Details Catalog

What each published number says, what it leaves out, and how to quote it without overstating it.

HMOS-7.2-SOVEREIGN-MAX

COMPANION FILE: ECOSYSTEM CATALOG (BEIGE)

Edition 01 · October 2026 · 8 pages

Public headline figures only. Internal names, methods and configuration are intentionally withheld.

01 · METRIC REGISTER

Every published number

Nine entries. The IDs are used throughout this file so a figure can be cited in one short reference.

ID	METRIC	PUBLISHED VALUE	CATEGORY
M01	Pipeline stages	19 (00 to 18 MAX)	Structure
M02	Zero-trust pillars	26	Security
M03	Dual-Max Overdrive Index	125.0	Performance
M04	Step survival	100% over 35 steps	Reliability
M05	Survival time	310 ms	Performance
M06	AST de-bloat	-41.7%	Efficiency
M07	Guard-clause parity	100%	Correctness
M08	Lamport quorum	5 nodes	Consensus
M09	Private files lock	SHA-256	Integrity

HOW TO READ

Values are quoted exactly as published. M05 is reported together with M04, so read the two as one result.

02 · INDEX AND SURVIVAL

Overdrive and survival

M03 · PERFORMANCE

125.0

Dual-Max Overdrive Index

PUBLISHED

One composite index, reported at 125.0 for the HMOS 7.2 Sovereign MAX release.

NOT STATED

Which inputs it combines, how they are weighted, and what a reference value would be. Components stay private.

CITE AS

HMOS-7.2-SOVEREIGN-MAX reports a Dual-Max Overdrive Index of 125.0 (self-reported).

M04 + M05 · RELIABILITY

100%

35-step survival

completed in 310 ms

PUBLISHED

100% survival across 35 steps, reported together with a time of 310 ms.

NOT STATED

What a step is, what is being survived, how many runs, and which hardware. Treat 310 ms as the time of that run, not as a general latency.

CITE AS

HMOS-7.2-SOVEREIGN-MAX reports 100% survival over 35 steps in 310 ms (self-reported).

03 · DE-BLOAT AND PARITY

Smaller code, same guards

M06 · EFFICIENCY

−41.7%

AST de-bloat

PUBLISHED

A 41.7% reduction attributed to AST de-bloat. An AST is the parsed tree of source code.

NOT STATED

Which code base was measured, how nodes were counted, and which tooling was used.

CITE AS

HMOS-7.2-SOVEREIGN-MAX reports a 41.7% AST de-bloat (self-reported).

M07 · CORRECTNESS

100%

Guard-clause parity

PUBLISHED

Guard clauses reported as fully preserved after de-bloat. A guard clause is an early-exit check at the top of a function.

NOT STATED

How parity was checked (tests, diffs or proofs) and across which files.

CITE AS

HMOS-7.2-SOVEREIGN-MAX reports 100% guard-clause parity alongside M06 (self-reported).

04 · CONSENSUS

Five nodes, one quorum

M08 · CONSENSUS

5

Lamport quorum nodes

PUBLISHED

Consensus across five nodes using Lamport quorum consensus.

NOT STATED

Node placement, fault model, message protocol and timing. None are described here.

CITE AS

HMOS-7.2-SOVEREIGN-MAX reports a 5-node Lamport quorum consensus (self-reported).

GENERAL BACKGROUND

In any majority quorum of five, three votes decide. The system can then keep deciding while up to two nodes have crashed.

This describes five-node majority quorums in general, not the inside of HMOS. The three highlighted nodes are an example.

05 · INTEGRITY

A SHA-256 lock on private files

M09 · INTEGRITY

SHA-256

Private files lock

PUBLISHED

Private files are protected by a SHA-256 security lock.

NOT STATED

The mechanism, what is hashed, where digests are kept, and how keys are handled.

CITE AS

HMOS-7.2-SOVEREIGN-MAX publishes a SHA-256 security lock on private files.

GENERAL BACKGROUND

SHA-256 turns any file into a 256-bit digest, written as 64 hex characters. Change one bit of the file and the digest changes.

So a digest can show that a file differs from a recorded one. On its own it does not hide the content or prove who made the file.

General property of the algorithm, not a description of the HMOS lock.

06 · NAMING AND VERSIONS

Which name to use

The studio page and the release identifier carry different version numbers. Use the release identifier when you quote.

STUDIO TITLE	HMOS 7.0 Principal Agent Architecture & Audit Studio
RELEASE ID	HMOS-7.2-SOVEREIGN-MAX
EDITION	Sovereign MAX
POSITIONING	Cross-boundary unified flagship, signature and enterprise AI infrastructure

CITATION RULE

Write "HMOS-7.2-SOVEREIGN-MAX" and the metric ID, for example "M04". Do not quote the 7.0 studio title as the version.

07 · GLOSSARY AND NOTICE

Terms and limits

AST	Abstract syntax tree: the parsed structure of source code.
Guard clause	An early-exit check at the top of a function.
Lamport	Logical clocks that order events without a shared wall clock.
Quorum	The minimum number of nodes that must agree to decide.
SHA-256	A hash function that outputs a 256-bit digest.
Zero trust	Verify every request; grant least privilege; assume breach.

CLAIMS STATUS

All figures are self-reported and were not independently verified for this edition. Confirm them with the owner before quoting them outside your team.

Names, methods, thresholds and configuration are withheld on purpose. No page here is meant to be enough on its own to rebuild or misuse the system.
